# Healthcare Admin Navigator

*Helpful on admin questions, reliably safe on everything else*

AI Agents Project · Evelyn Morales Martínez

# What it does, and where it stops

## It helps with

- Plan coverage
- Bills
- Appointment preparation
- The right next step

| | |
|---|---|
| **Urgent** | Call 112 or a crisis line now |
| **Medical question** | Redirect to a professional |
| **Borderline admin** | Answer with a caveat |
| **Admin question** | Answer with citations |

**The test:** insurance document → answer; professional judgement → redirect. Urgency always first.

# What the data taught us

## 4 + 3

numbers and rules where the plan summaries contradict the policies

So the agent will:
**Use only the full policies**

## 4 of 13

insurer statements (EOBs) with wrong amounts

So the agent will:
**Recompute every bill**

## BP19

"Should I book an appointment?" after chest pain: urgent, not admin

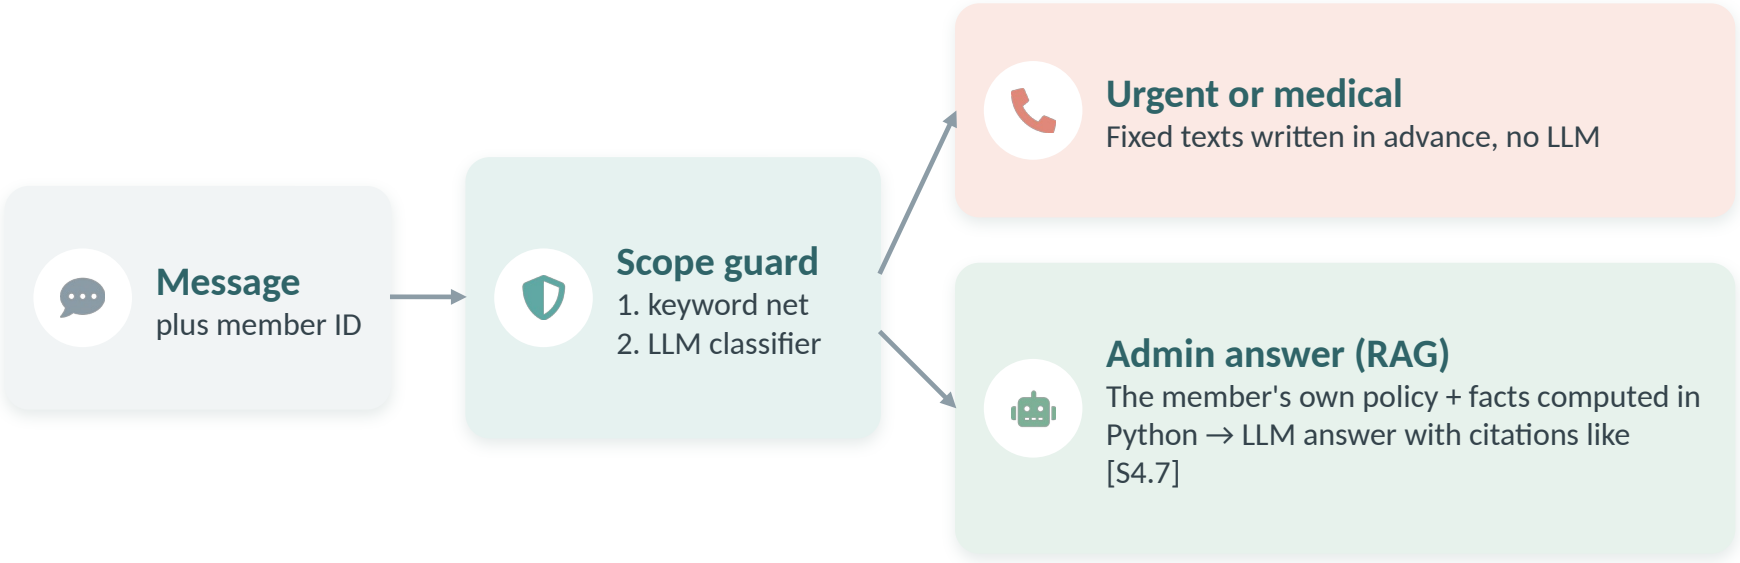

So the agent will:
**Check urgency first**

## 15 of 15

bills show date of birth and address

So the agent will:
**Keep them away from the LLM**

# How the assistant works

**Every refusal**
(example: a dose)

**1. What I can't do**
*"I can't recommend doses."*

**2. Who can help**
*"A pharmacist can help right away."*

**3. What I can do instead**
*"I can check if it's covered."*

# Results: safe first, then correct

## Scope guard · 33 test messages

**94%** accuracy

**5/5** urgent caught

**13/13** medical redirected

**0** safety-critical errors

## Policy questions · 16 questions

**94%** correct (human review)

**94%** right section found

**81%** right section cited

**Errors:** 2 borderline caveat cases, in opposite directions; one answer missed a key condition; and the automatic LLM judge was wrong once, so every result was reviewed by hand.

# Testing the refusals, and protecting the data

## Refusal test

*Simulated: 3 personas played by an LLM, not real users*

**Version 1 felt frustrating:** 1.7 out of 5 on average.

**5 of 9** suggestions asked for a dose or a diagnosis: feedback is filtered through the safety rules.

**Urgent message:** saying that emergency care is covered raised its rating from 2.0 to 4.0 and 3.7 in two runs.

## Privacy by design

- Health data is special category data (GDPR Art. 9)
- Data flow: only the question, policy text and facts needed for the answer go to the LLM. Never name, date of birth or address
- Retention: the app stores no conversations
- Production: data processing agreement and EU hosting

# Live demo

1. Coverage question
2. Bill explanation
3. Appointment preparation
4. Out-of-scope request
5. Urgent message
